Class Index

1.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

[Forward_Kinematics](#)

The following Class contains all the methods,attributes of Forward Kinematics Class. It provide methods to solve the forward kinematics of a robotic manipulator 5

[Inverse_Kinematics](#)

The following Class contains all the methods,attributes of Inverse Kinematics Class. It provide methods to solve the inverse kinematics of a robotic manipulator 9

[Manipulator](#)

This Class will call the Forward and Inverse Kinematics 13

Chapter 2

Chapter 3

Class Documentation

3.1 Forward_Kinematics Class Reference

The following Class contains all the methods,attributes of Forward Kinematics Class. It provide methods to solve the forward kinematics of a robotic manipulator.

```
#include <Forward_kinematics.hpp>
```

Public Member Functions

- void [solve_FK](#) (const std::vector< double > &_input_joint_angles)
this function will calculate the end effector position rom the given input_joint_angles.
- void [set_output_coordinates](#) (const std::vector< double > &_output_joint_coordinates)
It sets the output_coordinates(input) to the output_joint_coordinates.
- void [set_output_angles](#) (const std::vector< double > &_output_joint_angles)
It sets the given input to output_joint_coordinates.
- void [set_input_angles](#) (const std::vector< double > &_input_joint_angles)
It sets the given input to input_joint_angles.
- void [set_current_pose](#) (const std::vector< double > &_current_robot_pose)
It sets the given input to current_robot_pose.
- std::vector< double > [get_output_coordinates](#) ()
Getter method for returning output_joint_coordinates.
- std::vector< double > [get_output_angles](#) ()
Getter Method for returning output_joint_angles.
- std::vector< double > [get_current_pose](#) ()
Getter method for returning the current_robot_pose.
- std::vector< double > [get_input_angles](#) ()
Getter method for getting the input_joint_angles.

3.1.1 Detailed Description

The following Class contains all the methods,attributes of Forward Kinematics Class. It provide methods to solve the forward kinematics of a robotic manipulator.

3.1.2 Member Function Documentation

3.1.2.1 `get_current_pose()`

```
std::vector< double > Forward_Kinematics::get_current_pose ( )
```

Getter method for returning the `current_robot_pose`.

Returns

`current_robot_pose`

3.1.2.2 `get_input_angles()`

```
std::vector< double > Forward_Kinematics::get_input_angles ( )
```

Getter method for getting the `input_joint_angles`.

Returns

`input_joint_angles`

3.1.2.3 `get_output_angles()`

```
std::vector< double > Forward_Kinematics::get_output_angles ( )
```

Getter Method for returning `output_joint_angles`.

Returns

`output_joint_angles`

3.1.2.4 `get_output_coordinates()`

```
std::vector< double > Forward_Kinematics::get_output_coordinates ( )
```

Getter method for returning `output_joint_coordinates`.

Returns

`output_joint_coordinates`

3.1.2.5 `set_current_pose()`

```
void Forward_Kinematics::set_current_pose (
    const std::vector< double > & _current_robot_pose )
```

It sets the given input to `current_robot_pose`.

Parameters

<code>_current_robot_pose</code>	
----------------------------------	--

Returns

None

3.1.2.6 set_input_angles()

```
void Forward_Kinematics::set_input_angles (
    const std::vector< double > & _input_joint_angles )
```

It sets the given input to input_joint_angles.

Parameters

<code>_input_joint_angles</code>	
----------------------------------	--

Returns

None

3.1.2.7 set_output_angles()

```
void Forward_Kinematics::set_output_angles (
    const std::vector< double > & _output_joint_angles )
```

It sets the given input to output_joint_coordinates.

Parameters

<code>_output_joint_angles</code>	
-----------------------------------	--

Returns

None

3.1.2.8 set_output_coordinates()

```
void Forward_Kinematics::set_output_coordinates (
    const std::vector< double > & _output_joint_coordinates )
```

It sets the `output_coordinates(input)` to the `output_joint_coordinates`.

Parameters

<code>_output_joint_coordinates</code>	
--	--

Returns

None

3.1.2.9 solve_FK()

```
void Forward_Kinematics::solve_FK (
    const std::vector< double > & _input_joint_angles )
```

this function will calculate the end effector position rom the given input_joint_angles.

Parameters

<code>input_joint_angles</code>	these are the input joint angles of the robotic manipulator
---------------------------------	---

The documentation for this class was generated from the following files:

- [include/Forward_kinematics.hpp](#)
- [app/Forward_kinematics.cpp](#)

3.2 Inverse_Kinematics Class Reference

The following Class contains all the methods,attributes of Inverse Kinematics Class. It provide methods to solve the inverse kinematics of a robotic manipulator.

```
#include <Inverse_kinematics.hpp>
```

Public Member Functions

- void [solve_IK](#) (const std::vector< double > &, const std::vector< double > &)
- void [set_input_coordinates](#) (const std::vector< double > &)
- void [set_output_coordinates](#) (const std::vector< double > &)
- void [set_output_angles](#) (const std::vector< double > &)
- void [set_input_angles](#) (const std::vector< double > &)
- void [set_current_pose](#) (const std::vector< double > &)
- void [set_dh_a](#) (const std::vector< double > &)
- void [set_dh_d](#) (const std::vector< double > &)
- void [set_dh_alpha](#) (const std::vector< double > &)
- std::vector< double > [get_input_coordinates](#) ()
- std::vector< double > [get_output_coordinates](#) ()
- std::vector< double > [get_input_angles](#) ()

- `std::vector< double > get_output_angles ()`
- `std::vector< double > get_current_pose ()`
- `std::vector< double > get_dh_a ()`
- `std::vector< double > get_dh_d ()`
- `std::vector< double > get_dh_alpha ()`
- `void reset_pose ()`
- `std::vector< double > convert_input_angles_to_rotation_matrix (const std::vector< double > &)`

3.2.1 Detailed Description

The following Class contains all the methods, attributes of Inverse Kinematics Class. It provides methods to solve the inverse kinematics of a robotic manipulator.

3.2.2 Member Function Documentation

3.2.2.1 `convert_input_angles_to_rotation_matrix()`

```
std::vector< double > Inverse_Kinematics::convert_input_angles_to_rotation_matrix (
    const std::vector< double > & input_joint_angles )
```

3.2.2.2 `get_current_pose()`

```
std::vector< double > Inverse_Kinematics::get_current_pose ( )
```

3.2.2.3 `get_dh_a()`

```
std::vector< double > Inverse_Kinematics::get_dh_a ( )
```

3.2.2.4 `get_dh_alpha()`

```
std::vector< double > Inverse_Kinematics::get_dh_alpha ( )
```

3.2.2.5 `get_dh_d()`

```
std::vector< double > Inverse_Kinematics::get_dh_d ( )
```

3.2.2.6 get_input_angles()

```
std::vector< double > Inverse_Kinematics::get_input_angles ( )
```

3.2.2.7 get_input_coordinates()

```
std::vector< double > Inverse_Kinematics::get_input_coordinates ( )
```

3.2.2.8 get_output_angles()

```
std::vector< double > Inverse_Kinematics::get_output_angles ( )
```

3.2.2.9 get_output_coordinates()

```
std::vector< double > Inverse_Kinematics::get_output_coordinates ( )
```

3.2.2.10 reset_pose()

```
void Inverse_Kinematics::reset_pose ( )
```

3.2.2.11 set_current_pose()

```
void Inverse_Kinematics::set_current_pose (
    const std::vector< double > & _current_robot_pose )
```

3.2.2.12 set_dh_a()

```
void Inverse_Kinematics::set_dh_a (
    const std::vector< double > & _dh_a )
```

3.2.2.13 set_dh_alpha()

```
void Inverse_Kinematics::set_dh_alpha (
    const std::vector< double > & _dh_alpha )
```

3.2.2.14 set_dh_d()

```
void Inverse_Kinematics::set_dh_d (
    const std::vector< double > & _dh_d )
```

3.2.2.15 set_input_angles()

```
void Inverse_Kinematics::set_input_angles (
    const std::vector< double > & _input_joint_angles )
```

3.2.2.16 set_input_coordinates()

```
void Inverse_Kinematics::set_input_coordinates (
    const std::vector< double > & _input_joint_coordinates )
```

3.2.2.17 set_output_angles()

```
void Inverse_Kinematics::set_output_angles (
    const std::vector< double > & _output_joint_angles )
```

3.2.2.18 set_output_coordinates()

```
void Inverse_Kinematics::set_output_coordinates (
    const std::vector< double > & _output_joint_coordinates )
```

3.2.2.19 solve_IK()

```
void Inverse_Kinematics::solve_IK (
    const std::vector< double > & input_joint_coordinates,
    const std::vector< double > & input_joint_angles )
```
